

DEVESHRI SUNIL GURAV

Data Analyst | Python | SQL | Power BI | Excel

Pune, India • guravdeveshri@gmail.com • +91 74101 35526 • github.com/deveshrigurav • linkedin.com/in/deveshrigurav

PROFESSIONAL SUMMARY

Results-driven Data Analyst and B.Tech Computer Science graduate (Parul University, 2026) with hands-on internship experience and a portfolio of 5 end-to-end analytics projects across retail, telecom, food delivery, and supply chain domains. Skilled in transforming raw data into actionable business intelligence using Python, SQL, and Power BI. Proven ability to design KPI dashboards, uncover revenue drivers, and translate findings into clear recommendations that support data-driven decision-making. Available to contribute immediately.

TECHNICAL SKILLS

Languages & Querying: Python (Pandas, NumPy, Matplotlib, Seaborn), SQL (PostgreSQL, complex queries, aggregations)

BI & Visualization: Power BI (DAX, KPI dashboards, drill-through reports, slicers), Matplotlib, Seaborn

Backend & Automation: Flask, PostgreSQL, SMTP automation, REST APIs

Tools & Concepts: Excel (advanced), Jupyter Notebook, Git/GitHub, EDA, Data Cleaning, Dashboard Design, Data Storytelling

WORK EXPERIENCE

Web Development & Automation Intern — D & P Electronics, Pune

3 Months

- Architected and deployed Flask web applications with a PostgreSQL backend, supporting real-time admin data management for operational workflows.
- Built an SMTP-based automated email notification system that eliminated all manual follow-ups, reducing team communication overhead significantly.
- Developed an admin dashboard enabling real-time monitoring and management of user data, improving operational visibility.
- Automated repetitive business processes using Python scripting, measurably reducing manual intervention and increasing throughput.

PROJECTS

Swiggy Data Analysis — Business Intelligence Dashboard

Python · SQL

- Analyzed 7,000+ restaurant records across Indian cities to surface pricing vs. satisfaction insights, disproving a direct correlation between price and rating.
- Identified top-performing city-cuisine combinations (avg. rating >4.2) and flagged underperforming delivery zones, providing targeted optimization recommendations.
- Delivered SQL-driven pricing band and cuisine mix recommendations, enabling data-backed menu and expansion strategy decisions.

Superstore Sales Analysis — Executive KPI Dashboard

Power BI · Python

- Engineered a 5-KPI Power BI dashboard (Revenue, Profit, Orders, Margin, AOV) from 9,994 transactions with drill-through by region and quarter.
- Surfaced that the West region contributed 31% of total revenue and Technology drove 45% of profit, enabling leadership to reallocate resources to underperforming segments.

Customer Churn Analysis — Telecom Retention Strategy

Power BI · Python

- Analyzed 7,043 customer records and identified month-to-month plan holders paying >₹65/month as a 42% churn-risk segment vs. 11% on long-term contracts.
- Proposed a loyalty intervention at month 18; modeled post-month-24 churn reduction to <5%, providing a quantified retention roadmap for the business.

Inventory Optimization Analysis

Python · Excel

- Identified slow-moving SKUs and reorder timing gaps; recommended revised reorder cadence that reduced estimated excess holding costs by ~15%.

Business Automation Dashboard

Flask · PostgreSQL · Python

- ▶ Built a full-stack Flask automation system integrating PostgreSQL, SMTP alerts, and an admin dashboard, enabling end-to-end workflow automation with minimal manual oversight.

EDUCATION

B.Tech — Computer Science Engineering | Parul University (PIT)

2022 – 2026

CGPA: 7.10 / 10

ACHIEVEMENTS & HACKATHONS

- ▶ Competed in TechSpark Hackathon 2025, PU Code Hackathon 2.0, and Vadodara Hackathon 6.0 — demonstrating ability to deliver technical solutions under time pressure.
- ▶ Built an end-to-end analytics portfolio spanning 5 domains (retail, telecom, food delivery, inventory, automation) independently, applying industry-standard tools throughout.
