PROFESSIONAL SUMMARY

Data Analyst with 4 end-to-end projects across 125,000+ real records, covering SQL, Python, and Power BI. Quantified a 31-point churn gap between contract types, disproved a stakeholder pricing assumption using statistical analysis ($r \approx 0.04$), and replaced manual reporting with interactive dashboards across 3 domains. GitHub portfolio with documented code available for review.

SKILLS

Languages & Querying: Python (Pandas, NumPy), SQL (PostgreSQL, complex joins, window functions, CTEs), DAX

Visualisation & BI: Power BI (KPI dashboards, drill-through reports, DAX measures), Tableau, Matplotlib, Seaborn

Analytics: Exploratory Data Analysis, Customer Segmentation, Churn & Retention Analysis, KPI Reporting, Statistical Hypothesis Testing, Cohort Analysis

Data Engineering: Data Cleaning & Transformation, ETL Pipeline Design, PostgreSQL Schema Modelling, Reporting Automation

Tools & Workflow: Excel (advanced), Jupyter Notebook, Flask, Git, GitHub

PROJECTS

Olist E-Commerce Analysis — SQL & Power BI

- Modeled a 9-table relational database in PostgreSQL from 99,441 real orders; wrote 5 business-critical queries using multi-table joins, CTEs, and window functions.
- Quantified a 40% decline in customer review scores (4.29 $\rightarrow$ 2.57) across 7,700+ delayed orders, demonstrating the impact of delivery delays on customer satisfaction.
- Built an interactive Power BI dashboard with 5 DAX-driven visuals (revenue trend, category performance, seller benchmarking, retention segmentation) translating SQL findings into a stakeholder-ready view.

Swiggy Business Analysis Dashboard

- Queried and cleaned 7,000+ restaurant records across 15 Indian cities; identified mid-tier pricing (₹150–300) as top satisfaction driver.
- Tested the stakeholder assumption that higher-priced restaurants receive higher ratings; Pearson correlation analysis returned $r \approx 0.04$, disproving the hypothesis and shifting attention toward city- and cuisine-level factors as stronger satisfaction drivers.
- Built an interactive Power BI dashboard with drill-through city and cuisine filters, consolidating six KPIs into a stakeholder-ready decision-support view.

Telecom Customer Churn Analysis

- Segmented 7,043 records by contract type, tenure, and ARPU; quantified a 31-point churn gap (42% month-to-month vs 11% long-term).
- Found that churned customers skew heavily toward low-tenure accounts, reinforcing early-tenure retention as the highest-leverage intervention window.

Retail Sales Analytics — Executive KPI Dashboard

- Analysed 9,994 transactions across regions and product categories; automated reporting workflow end-to-end.
- Uncovered that Technology drove over 2x the profit of Furniture (\$145K vs. \$18K) despite comparable sales volume, pointing to Furniture's discounting as a margin drain.

CERTIFICATIONS

- Deloitte Australia — Data Analytics Job Simulation, Forage, May 2026
- Tata — Data Visualisation: Empowering Business with Effective Insights Job Simulation, Forage, June 2026

ACHIEVEMENTS & VOLUNTEERING

- Team Lead — PU Code Hackathon 2.0: Led team from ideation to working biometric authentication prototype, coordinating 4 workstreams under a 48-hour deadline.
- Hackathon Completions — Delivered working solutions at TechSpark 2025, PU Code 2.0, and Vadodara 6.0 under time-constrained build conditions.
- Analytics Portfolio — 6-domain portfolio covering data cleaning, EDA, BI reporting, automation, and statistical analysis — all repos public on GitHub.

EDUCATION

B.Tech in Computer Science Engineering, Parul University (PIT), Vadodara, India

2022 – 2026
