

DEVESHRI GURAV

Data Analyst · SQL · Python · Power BI · Tableau

guravdeveshri@gmail.com · +91 74101 35526 · Pune, India · [GitHub](#) · [LinkedIn](#) · [Portfolio](#)

PROFESSIONAL SUMMARY

Data Analyst with end-to-end project experience across SQL, Python, and Power BI. Statistically disproved a pricing–rating correlation across 7,000+ restaurant records ($r \approx 0.04$) and identified a 42% churn cohort in telecom as the primary retention target. Built interactive dashboards that replaced manual reporting workflows across retail, telecom, and food-tech domains.

PROJECTS

Swiggy Business Analysis Dashboard

Python · SQL · Power BI

- Queried 7,000+ restaurant records across 15+ Indian cities. Statistically disproved a pricing–rating correlation ($r \approx 0.04$); identified mid-tier pricing (Rs.200–400) as the top satisfaction driver — counter to the assumed pattern.
- Built an interactive Power BI dashboard with drill-through city and cuisine filters, enabling self-serve stakeholder access without analyst intervention.
- Pipeline: SQL extraction → Python EDA → Power BI drill-through dashboard → stakeholder-ready report.

Telecom Customer Churn Analysis

Python · SQL · Power BI

- Segmented 7,043 customer records by contract type, tenure, and ARPU. Month-to-month customers above Rs.65/month churn at 42% vs. 11% for long-term contracts — the clearest retention target in the dataset.
- Pinpointed Month 18 as the churn inflection point. Modelled a loyalty intervention; simulated cohort showed churn declining below 5% by Month 24. Delivered as an interactive Power BI retention dashboard.
- Pipeline: Raw CSV → Python cleaning → SQL segmentation → Power BI dashboard → stakeholder-ready report.

Retail Sales Analytics — Executive KPI Dashboard

Python · Power BI

- Analysed 9,994 transactions across regions and categories. West region: 31% of revenue; Technology: 45% of profit — two findings that immediately refocused leadership attention on the right segments.
- Replaced manual ad-hoc spreadsheet reporting with a 5-KPI executive dashboard (Revenue, Profit, Orders, Margin, AOV) built with DAX measures and regional drill-through.
- Pipeline: Excel source → Python EDA → DAX modelling → Power BI dashboard.

TECHNICAL SKILLS

Languages:	Python (Pandas, NumPy) · SQL · DAX
Visualisation:	Power BI (Dashboards, Drill-Through, DAX) · Tableau · Matplotlib · Seaborn
Analytics:	EDA · KPI Reporting · Customer Segmentation · Churn Analysis · Predictive Modelling · A/B Testing
Engineering:	Data Cleaning · ETL · PostgreSQL · REST APIs · Reporting Automation
Tools:	Excel (Advanced, Pivot Tables, VLOOKUP) · Jupyter Notebook · Flask · Git/GitHub

CERTIFICATION & TRAINING

Deloitte Australia — Data Analytics Virtual Program (Forage)

May 2026

- Industry-structured tasks: forensic data workflows, business logic classification, BI reporting.
- Built a Tableau dashboard for stakeholder communication; applied Excel-based logic to classify datasets.

ACHIEVEMENTS

- 3 Hackathons completed under time pressure — TechSpark 2025, PU Code 2.0, Vadodara 6.0 — delivered working solutions at all three.
- End-to-end analytics portfolio across 5 domains covering data cleaning, EDA, BI reporting, and process automation.

EDUCATION

B.Tech — Computer Science Engineering | Parul University (PIT)

2022 – 2026

CGPA: 7.35 / 10 · Expected Graduation: June 2026
