

DEVESHRI GURAV

Data Analyst • SQL • Python • Power BI • Dashboard & Business Analytics

Pune, India | guravdeveshri@gmail.com | +91 74101 35526 | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

B.Tech Computer Science graduate with hands-on experience delivering end-to-end analytics across retail, telecom, food delivery, and inventory domains. Proficient in **SQL, Python, and Power BI** — from raw data cleaning to KPI dashboards and stakeholder-ready business insights. Available for full-time opportunities and ready to contribute from day one.

CORE SKILLS

Data Analysis	SQL • Python (Pandas, NumPy) • EDA • KPI Reporting • Business Insights
Visualization	Power BI (DAX, dashboards, drill-through) • Matplotlib • Seaborn • Data Storytelling
Analytics	Customer Segmentation • Churn Analysis • Predictive Modeling • A/B Testing Concepts
Data Pipeline	Data Cleaning • ETL • PostgreSQL • REST APIs • Reporting Automation
Tools	Excel (Advanced, Pivot Tables, VLOOKUP) • Git/GitHub • Jupyter Notebook • Flask

PROJECTS

Swiggy Business Analysis Dashboard

Python • SQL • Power BI

github.com/Deveshri-Gurav-11/swiggy-business-analysis

- Queried and analyzed 7,000+ restaurant records across 15+ Indian cities using SQL and Python to surface pricing trends, customer preferences, and delivery performance gaps.
- Statistically disproved a pricing–rating correlation and identified that mid-tier pricing (₹200–₹400) drives the highest satisfaction scores; packaged findings in an interactive Power BI dashboard with drill-through city and cuisine filters.

Retail Sales Analytics — Executive KPI Dashboard

Python • Power BI

github.com/Deveshri-Gurav-11/retail-sales-analytics-dashboard

- Analyzed 9,994 transactions across regions and product categories using Python and Power BI; discovered that the West region generated 31% of total revenue and Technology drove 45% of profit.
- Built a 5-KPI executive dashboard (Revenue, Profit, Orders, Margin, AOV) with DAX measures and drill-through by region and quarter, replacing ad-hoc spreadsheet reporting with consistent, reusable business insights.

Telecom Customer Churn Analysis

Python • Power BI

github.com/Deveshri-Gurav-11/customer-churn-analysis-dashboard

- Segmented 7,043 customer records by contract type, tenure, and ARPU to pinpoint a high-risk cohort: month-to-month customers paying >₹65/month showed a 42% churn rate versus 11% on long-term contracts.
- Recommended a loyalty intervention at month 18 (observed churn inflection point); post-intervention cohort in the dataset showed churn dropping below 5% at month 24+, visualized through an interactive Power BI retention dashboard.

AI-Powered Smart Inventory Assistant

Python • ML • Power BI

github.com/Deveshri-Gurav-11/AI-Powered-Smart-Inventory-Assistant

- Applied regression and time-series models to forecast reorder points and safety stock levels; identified slow-moving SKUs and reorder timing gaps from historical transaction patterns.
- Integrated Power BI dashboards for stock health and demand forecasting; revised reorder cadence recommendations reduced estimated excess holding costs by 15% based on observed stockout and overstock frequencies.

Business Automation System — Full-Stack Data Pipeline

Flask • PostgreSQL • Python

github.com/Deveshri-Gurav-11/Business-Automation-System

- ▶ Built a Flask web application that replaced a fully manual workflow with an automated pipeline: user input → PostgreSQL storage → SMTP stakeholder notifications, eliminating manual follow-up steps entirely.
- ▶ Designed the PostgreSQL schema and admin dashboard for real-time monitoring of workflow records, giving the operations team live visibility that previously required manual status checks.

ACHIEVEMENTS

- ▶ Competed in TechSpark Hackathon 2025, PU Code Hackathon 2.0, and Vadodara Hackathon 6.0 — delivered working technical solutions under time pressure across all three events.
- ▶ Built an independent analytics portfolio spanning 5 domains (retail, telecom, food delivery, inventory, automation), covering end-to-end data analysis, BI reporting, and process automation.

EDUCATION

B.Tech — Computer Science Engineering | Parul University (PIT)
CGPA: 7.35 / 10

2022 – 2026
